SaskArc Industries  
P.O. Box 990  
Oxbow, SK S0C 2B0

Attn: Brent Scott

We contracted with SaskArc Industries in February of 2006 for the fabrication of the following equipment:

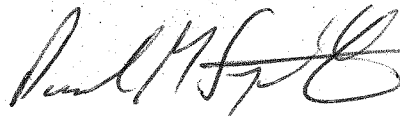

- 50' diameter storage silo platework and structural support steel
- 18' diameter recycle silo (constructed in one piece)
- Stair tower for storage silo
- Enclosure steel for equipment room and silo roof equipment

SaskArc offered competitive pricing and a reputation for quality workmanship and timely performance backed by CWB certification. We were impressed with the accuracy of their weight takeoffs and their responsiveness to specification requirements.

During project execution, they corresponded regularly with our engineering staff to insure a complete understanding of our requirements. Any changes or deviations to our requirements were fully documented and approved prior to implementation.

SaskArc endured a rigorous quality program imposed by the end user, which included, among other requirements, 100% UT testing of all full penetration welds and inspection by CSA certified Level II inspectors.

We have been quite pleased with the quality of SaskArc's work and the character and professionalism of their staff and we highly recommend them for your steel fabrication needs. We anticipate the opportunity to work with SaskArc again and look forward to a long term relationship.

David M. Sylvester  
Project Manager  
Allen-Sherman-Hoff division  
of Diamond Power International Inc.
