RE: Callidus Job No. F071234 AMEC-Colt-Shell Canada

Dear Mr. Hodgson:

It is with great pleasure that I write this letter to commend SaskArc for an outstanding job of fabrication and delivery of the 318' OAH Guyed Flare tip and stack to the Albion Sands Expansion project.

SaskArc understood the value stream and teamed with Callidus and our end user, Shell Canada, to find the right combination of shippable lengths to minimize installation costs.

Through this project, we have determined SaskArc to be an excellent gateway for any projects going to Northern Canada.

We were especially pleased with the organized execution and communication of issues related to the fabrication and delivery of this significant project. We found your response to our inquiries comprehensive and swift which allowed us to meet critical goals.

It was a great benefit to our Installation Team to receive the equipment in the field in good condition and prior to scheduled delivery. Because of SaskArc's responsive action, Callidus was able to deploy our field resources ahead of schedule, further strengthening our commitment to the customer.

It is with great satisfaction that we express our appreciation for the SaskArc team.

Sincerely,

Jim Huskinson
Fabrication Manager
